

# SENATOR REID: Fighting For Clean Energy Jobs In Nevada

CLEAN ENERGY

Nevada has become a leader in our nation's transition to a clean energy economy. Our state is well positioned geographically, resource-wise, and we have leading researchers and major corporations committed to green buildings and renewable energy development. To help lead this effort Senator Reid:

## Highlights

- ★ Incentivized \$5.5 billion in investments in Nevada's clean energy resources through the availability of tax credits, grants, and loan guarantees.
- ★ Worked to create a new fast-track permitting process for clean energy development on public lands. The process expedites reviews and right-of-way grants for wind, solar, geothermal, and transmission projects, helping capitalize on clean energy incentives in the Recovery Act.
- ★ Facilitated the public-private partnership needed for the One Nevada Transmission Line. The transmission line connects northern and southern Nevada's electricity grids for the first time which helps to unlock vast clean energy potential and strengthen our state's electric grid for the future.
- ★ Cosponsors the annual National Clean Energy Summit in Nevada which helps build a dialogue and create momentum among the nation's leaders in clean energy.
- ★ Supported legislation that accelerated the retirement of coal plants in Nevada and expanded renewable energy development in Nevada in the coming years.
- ★ Worked to have the nation's first utility-scale solar project on tribal land built in Nevada.
- ★ Spearheaded the Senate's passage and President Obama's signature of the Hoover Power Allocation Act, which will ensure that clean, renewable electricity from Hoover Dam will continue to power Nevada through 2067.
